Useful information

The type of the fireplace you are choosing depends from its purpose. Pay attention the exterior, appreciate the heat letting and rate its efficiency.

IMPORTANT!

As the rate of efficiency is bigger, as the economy of fuel is better.

We offer you:

Efficiency: - **over 70%**
Fuel economy: **over 30%**

Rated power - power, achieved with minimal fuel (wood) standard for 1 hour at isolated access to primary air in the laboratory.

Maximal power - power, achieved in activated consumption process, achieved through optimal supply of air and fuel without overheating the fireplace.

How you can calculate how many kilowatts are required to be heated the needed area?

1 kW rated power can heat about **7-9 m² area.***

* The calculation is approximately and it is made at a 2.6 - 2.7 m height of the area.

🔥 Heating exchanger 5P

- 5 ribs
- diameter of the chimney: Ø 130 mm
- height: 72 cm

🔥 Heating exchanger 5P XL

- 5 ribs
- diameter of the chimney: Ø 130 mm
- height: 89 cm
